

16. **Caution:** It is essential that all procedures involving RNA be done on ice, using only sterile solutions and plasticware. Gloves should always be worn when handling RNA to minimize the chance of contamination by RNases. It is generally advisable to keep solutions for RNA uses only. This prevents contamination taking place during other procedures.

## Acknowledgments

This chapter is journal paper number 14752 of Purdue Agricultural Experiment Station. Work on potato leafroll virus was supported by the Scottish Office Agriculture and Fisheries Department.
